Report n. 161/20/00128/BT

### 1 OBJECT OF THE TESTS

The objective of the tests is the evaluation of the degree of protection (IP degree) provided by the enclosure of EUT in accordance to the requirements of specified reference standard

### 2 IDENTIFICATION

### 3 EQUIPMENT UNDER TEST (EUT)

**EQUIPMENT UNDER TEST (EUT)** 

Trade Mark: Bus Net

Manufacturer:

Description:

MFC control system

Model/Type reference:

LABKEY ONE NFC

Ratings: 5 V

Possible test case verdicts:

test case does not apply to the test object:
test object does meet the requirement:
test object does not meet the requirement:
test object has not been evaluated
N/E

**General remarks:** 

The test results presented in this report relate only to the object tested.

This report shall not be reproduced, except in full, without the written approval of the laboratory.

Throughout this report a comma (point) is used as the decimal separator.

Testing:

Date of receipt of test item: 2020-05-05

Date (s) of performance of tests: 2020-05-06 and 2020-05-12

Sampling and adopted criteria:

Equipment used for testing was selected by the customer. Sampling criteria adopted by the customer is unknown to CREI Ven laboratory.

**Documentation reference** 

All the documentations and customer declarations are saved in the CREI Ven project 161/20

### 5 TEST DESCRIPTION

### 5.1 First characteristic numeral of IP code

The first characteristic numeral of IP code, as specified in the reference standard, indicates that:

- the enclosure provides protection of persons against access to hazardous parts by preventing or limiting the ingress of a part of the human body or an object held by a person and simultaneously
- the enclosure provides protection of equipment against the ingress of solid foreign objects

Degree of protection against access to hazardous parts indicated by the first characteristic numeral

| First                  | Degree of   | protection  |                                     |
|------------------------|---|---|-------------------------------------|
| characteristic numeral | Brief description   | Definition  | Test condition                      |
| 0                      | No test required  |   |                                     |
| 1                      | Protected against access to hazardous parts with the back of the hand | The access probe, sphere of 50mm Ø, shall have adequate clearance from hazardous parts              | See par. 12.2 of reference standard |
| 2                      | Protected against access to hazardous parts with a finger             | The jointed test finger of 12mm Ø, 80mm length, shall have adequate clearances from hazardous parts | See par. 12.2 of reference standard |
| 3                      | Protected against access to hazardous parts with a tool               | The access probe of 2.5mm $\varnothing$ shall not penetrate   | See par. 12.2 of reference standard |
| 4                      | Protected against access to hazardous parts with a wire               | The access probe of 1.0mm $\varnothing$ shall not penetrate   | See par. 12.2 of reference standard |
| 5                      | Protected against access to hazardous parts with a wire               | The access probe of 1.0mm $\varnothing$ shall not penetrate   | See par. 12.2 of reference standard |
| 6                      | Protected against access to hazardous parts with a wire               | The access probe of 1.0mm $\varnothing$ shall not penetrate   | See par. 12.2 of reference standard |

# Protection against solid foreign objects

| First                  | Degree of   | protection   |  |
|------------------------|---|--|--|
| characteristic numeral | Brief description   | Definition   | Test condition                               |
| 0                      | No test required  |  |  |
| 1                      | Protected against solid foreign objects of 50mm Ø and greater               | The object probe, sphere of 50mm ∅, shall not fully penetrate See note 1   | See par. 13.2 of reference standard          |
| 2                      | Protected against solid foreign objects of 12.5mm $\varnothing$ and greater | The object probe, sphere of 12.5mm ∅, shall not fully penetrate See note 1   | See par. 13.2 of reference standard          |
| 3                      | Protected against solid foreign objects of 2.5mm Ø and greater              | The object probe of 2.5mm Ø, shall not penetrate at all See note 1   | See par. 13.2 of reference standard          |
| 4                      | Protected against solid foreign objects of 1.0mm Ø and greater              | The object probe of 1.0mm Ø, shall not penetrate at all See note 1   | See par. 13.2 of reference standard          |
| 5                      | Dust protected  | Ingress of dust is not totally prevented, but dust shall not penetrate in a quantity to interfere with satisfactory operation of the apparatus or to impair safety | See par. 13.4 and 13.5 of reference standard |
| 6                      | Dust protected  | No ingress of dust   | See par. 13.4 and 13.6 of reference standard |
| Note 1: the full dia   | ameter of the object probe shall not pass th                                | rough an opening of the enclosure  |  |

Report n. 161/20/00128/BT

### 5.2 Second characteristic numeral of IP code

The second characteristic numeral of IP code, as specified in the reference standard, indicates the degree of protection provided by enclosures with respect to harmful effects on the equipment due to the ingress of water

| Second                 | Degree of  |  |                                       |
|------------------------|--|--|---------------------------------------|
| characteristic numeral | Brief description  | Definition   | Test condition                        |
| 0                      | No test required   |  |                                       |
| 1                      | Protected against vertically falling water drops                                 | Vertically falling drops shall have no harmful effects   | See par. 14.2.1 of reference standard |
| 2                      | Protected against vertically falling water drops when enclosure tilted up to 15° | Vertically falling drops shall have no<br>harmful effects when the enclosure is tilted<br>at any angle up to 15° on either side of<br>vertical | See par. 14.2.2 of reference standard |
| 3                      | Protected against spraying water   | Water sprayed at an angle up to 60° on either side of the vertical shall have no harmful effects   | See par. 14.2.3 of reference standard |
| 4                      | Protected against splashing water  | Water splashed against the enclosure<br>from any direction shall have no harmful<br>effects  | See par. 14.2.4 of reference standard |
| 5                      | Protected against water jets   | Water projected in jets against the enclosure from any direction shall have no harmful effects   | See par. 14.2.5 of reference standard |
| 6                      | Protected against powerful water jets  | Water projected in powerful jets against the enclosure from any direction shall have no harmful effects  | See par. 14.2.6 of reference standard |
| 7                      | Protected against Immersion Tank   | The enclosure is completely immersed in water  | See par. 14.2.7 of reference standard |

### 5.3 Degree of protection against access to hazardous parts indicated by the additional letter

The additional letter indicates the degree of protection of persons against access to hazardous parts. Additional letters are only used

- > If the actual protection against access to hazardous parts is higher than that indicated by the first characteristic numeral
- Or if only the protection against access to hazardous parts is indicated, the first characteristic numeral being replaced by an X

| Additional | Degree of                              | Test condition  |                                     |
|------------|--|---|-------------------------------------|
| letter     | Brief description                      | Definition  | rest condition                      |
|            | hack of the hand                       | The access probe, sphere of 50mm Ø, shall have adequate clearance from hazardous parts                    | See par. 15.2 of reference standard |
| В          | Protected against access with a finger | The jointed test finger of 12mm ∅,<br>80mm length, shall have adequate<br>clearances from hazardous parts | See par. 15.2 of reference standard |
| С          | Protected against access with a tool   | The access probe of 2.5mm ∅,<br>100mm length shall have adequate<br>clearance from hazardous parts        | See par. 15.2 of reference standard |
| D          | Protected against access with a wire   | The access probe of 1.0mm ∅, 100mm length shall have adequate clearance from hazardous parts              | See par. 15.2 of reference standard |

### 8 MEASUREMENT UNCERTAINTY

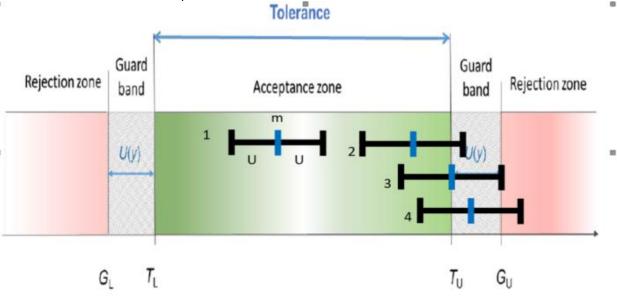

### 8.1 Decision Rule

### **Decision Rule**

- A decision rule defines the role of uncertainty in assessing the conformity of measured values with respect to specification limits.
- The CREIVen decision rule uses the "guard band" method minimizing the "supplier risk" (type 1 risk or alpha risk), that is the risk of refusing a compliant product.
- The "guard band" is established equal to the extended uncertainty U beyond the tolerance limit; Gu = Tu + U
- The probability distribution of the measurement uncertainty is assumed to be Gaussian
- · If a test does not provide any Tolerance Limit the conformity assessment and the decision rule are not needed.

### **Nomenclature**

- Gu: (G<sub>L</sub>) width of the Upper (lower) guard band
- · m: measured value
- P: probability of correct acceptation, (1-P: probability of refusing a compliant product)
- Tu: Upper Tolerance Limit
- TL: Lower Tolerance Limit
- Tolerance: interval of width equal to Tu TL

| Case         | Decision Rule                                | Note   |
|--------------|--|--|
| Case 1, 2, 3 | Measurement complies with specifications     | <ul> <li>T<sub>L</sub> ≤ m ≤ Tu; the probability P of correct acceptation is: 100% ≤ P ≤ 50%</li> <li>m+U (m-U) always falls into the Gu (G<sub>L</sub>)</li> </ul>      |
|              | Measurement NOT complies with specifications | <ul> <li>m &gt; Tu (T<sub>L</sub>): the probability P of correct acceptation is lower than 50%</li> <li>m+U (m-U) falls into the upper (lower) rejection zone</li> </ul> |

Note about qualitative tests: The uncertainty balance is applicable only to tests whose result is numerical. For the qualitative tests, are verified the tolerance and repeatability of the quantities that stimulate the EUT. Tolerances and repeatability of these quantities are part of the instrumentation calibration.

### In accordance with:

- IEC Guide 115 Application of uncertainty of measurement to conformity assessment activities in the electrotechnical sector
- ILAC-G8:03/2009 Guidelines on the Reporting of Compliance with Specification
- EUROLAB Technical report nr 01/2017
- JGCM guide 106:2012
